

Purpose is to: Define a benchmark NSEM improvement level: the switch to rk2 filters from fixed spatial filters. No cone model

UOP: Unconditioned Optimal Prediction, ie. the mean rate of the raster

"Bits" refers to the (LogProb of Model – LogProb of Uniform Firing Rate)

Each color is a different retinal prep

Symbol * is for OFF Parasol, Symbol . is for ON Parasol

If bits are negative, consider model fail, plotted as zero
