

Purpose is to: Using WN: Examine effect of ONOff Hard rectification channels, no cone model

UOP: Unconditioned Optimal Prediction, ie. the mean rate of the raster

"Bits" refers to the (LogProb of Model – LogProb of Uniform Firing Rate)

Each color is a different retinal prep

Symbol * is for OFF Parasol, Symbol . is for ON Parasol

If bits are negative, consider model fail , plotted as zero

Computation Date 30–Mar–2014 21:03:32
