

Purpose is to: Show Cone model has minimal effect for WN fits  
 UOP: Unconditioned Optimal Prediction, ie. the mean rate of the raster  
 "Bits" refers to the (LogProb of Model – LogProb of Uniform Firing Rate)  
 Each color is a different retinal prep  
 Symbol \* is for OFF Parasol, Symbol . is for ON Parasol  
 If bits are negative, consider model fail , plotted as zero
